FLOOD BARRIER SHIELD FOR DOORS

Zero International, Inc.

▲ Simple to install and remove, this water-tight barrier helps in protecting doors from water ingress. Available in widths for inside or outside jamb mounting, and in stock heights of 10, 20, 24, 30, and 36 in. or to specific heights needed. The USA-made aluminum shield requires no tools to install into pre-mounted vertical channels when needed. The unit complies with FEMA and FIA regulations, for use on doors. The key to the shield's impermeability is the use of neoprene rubber that lines the sides and the bottom to ensure a water-tight seal.

TRACK WINDOWS

NEW

Nissen & Company, Inc.

Top Roller Track window closed

▲ Series ET Horizontal sliding window, one stationary sash and one active sash with nylon rollers top track for larger windows. Surface mounted with no obstruction or groves in the counter. The bottom channels are fitted with a brush type wool pile seal on the active sash to prevent drafts. Frames and glass channels of heavy type 6063-T5 aluminum extrusions. Finishes available in anodized 204R-1 clear aluminite and bronze are standard. Baked enamel, Kynar paint, and 215R-1 anodic are special orders. Includes sliding bolt locks and screw pin locks.

Product Application:

- Schools
- Hospitals
- Costco, In-N-Out Burger, Dairy Queen
- Disneyland, Knott's Berry Farm, SeaWorld
- Commercial buildings

Performance Data:

- Ability to have larger windows with no bottom track under active sash
- Variety of colors and finishes
