

Key PDM Strengths:

- **Qualify Competent Subcontractors**-Lower project costs by reducing the time required to gather and update prequalification
- **Bid Coordination**-Minimize cost of errors & omissions by being certain that all subcontractors have bid the correct package
- **Document Version Control**-Increase productivity and reduce litigation risk with comprehensive version control of documents. Know which subs received and viewed specific documents & when
- **Expedite Project Close-Out**-Close-out projects faster, reduce litigation legal fees and receive retainer sooner with electronic, searchable archiving of all project documents.
- PDM was written expressly for the CM/GC market. We understand their business and develop technologies aimed at their specific needs.
- PDM has an “open” API (application programming interface) which is the interface that an application provides in order to allow “requests” for services to be made by other computer programs. This technology allows us to adapt/integrate with just about any 3rd party application.
- PDM has the right file format for any document related task (digital or print), allowing for fast viewing and search capability over the web as well as high quality output.
- PDM has integrated print fulfillment through ReproMAX.
- PDM is integrated with On Screen Take Off.
- PDM Data can be sent to ReproMAX to create a project closeout for the owner.
- PDM can handle all ITB, addenda, and contract award notifications.
- PDM is environmentally “friendly” through the reduction of paper documents and fuel emissions associated with transportation of documents.
